A place for what you love.

The consumer-facing home for your library, discovery and account.

Compact Bookends / A2

Two open bookends hold a fixed star. The silhouette suggests an L without closing around the collection. Coral gives Locker its own welcoming identity within the Polaris family.

Identity system / Edition 01

Start with the right reference.

03-05 / Identity

Positioning, architecture and the approved master.

06-10 / Foundations

Optical sizing, clear space, lockups, colour and typography.

11-15 / Expression

Composition, consumer journeys, voice, motion and attribution.

16-18 / Delivery

Misuse, asset selection and governance.

Your collection. Your next discovery.

Use this as an expressive line, not a promise of features that are not available.

Purpose

Polaris Locker is the user-facing home for a person’s software collection, discovery and account within the Polaris Key ecosystem.

Personality

Welcoming, capable and clear. Let people recognize what they own and understand their next action.

Language

Use Polaris Locker on first mention; Locker in a clearly established context. Navigation labels are Library, Discover and Account. Avoid calling the consumer experience an admin console.

One family. Distinct responsibilities.

Polaris Key

Developer platform and infrastructure. Keep the violet Pinned K and the existing capability identities.

Polaris Key Delivery

Delivery family using Star Cut. Distribution and Update retain their existing relationships and colours.

Polaris Locker

Consumer experience using coral Compact Bookends. It is a subbrand, not a new service slug or a replacement for Commerce.

Customer products

Product artwork, names and actions lead inside the collection. Locker provides the surrounding navigation and account context.

The star stays open.

The supplied vectors are the production interpretation of selected concept A2.

Three independent shapes

A tall left bookend, a shorter rising right bookend and one four-point star. Preserve the asymmetry, softened corners and clear gaps.

Always use the master

Use the supplied SVG, outlined lockup or exported PNG. Never trace the concept image, rebuild the star, or create a new shelf arrangement.

Small is a separate drawing.

Choose the cut by displayed size, not by export resolution or device pixel ratio.

16px 24px 32px 48px 96px

16-23px / Micro

Use the dedicated micro source for browser favicons and editor integrations. Simplified corners and a wider star preserve the three-part reading.

24px and above / Master

The master supports service-size, navigation and display use. All cuts are flat; Locker has no signing bit or gradient.

Give the mark room.

Minimum clearance

Reserve at least one quarter of the visible glyph height around standalone marks and lockups. Background containers can be closer only in the supplied app-icon and badge canvases.

Minimum use

Standalone mark: 24 CSS px square; micro exception: 16px. Horizontal lockup: 180px wide. Compact: 120px wide. Stacked: 160px wide. For crowded navigation, choose the mark with an accessible label.

One name. Flexible proportions.

Polaris Locker

Polaris Locker

Stacked

Coral belongs to Locker.

Use bright coral on dark; use the deeper companion on light for useful contrast.

Coral / dark	#FF7869	7.71:1
Deep coral / light	#C44438	4.68:1
White / deep coral	#FFFFFF	4.96:1
Dark / coral	#060912	7.71:1
Body / dark	#DBE4FF	15.68:1

Ratios are computed from the flat sRGB pairs shown. Bright coral is not the light-theme body-text colour. Gold remains the Key signing indicator; coral is never a success, warning or payment state by itself.

Friendly, with a clear hierarchy.

Your library

Find something worth opening.

Rubik / 400, 500, 600

400 body and badge prefixes; 500 controls and wordmarks; 600 headings. Avoid universal boldness.

Product rhythm

Body 16-18px, labels 14-16px, section titles 24-32px. Let long names wrap. Use at least 1.5 line height for reading copy.

Technical details

Use the parent system’s JetBrains Mono for diagnostic details only. The pack includes Rubik and its OFL notice; outlined logos need no installed font.

Let the products lead.

Page structure

Use the shared dark and light grounds. Keep coral for identity, selected navigation, focus and a restrained primary action.

Collection cards

Prioritize real product artwork and title, then access and a useful action. Device capacity and license detail support the decision.

Layout

Use a 4px spacing base, 24px section gutters and generous vertical spacing. On phones use one product column and keep the primary action reachable.

Imagery

Use authentic product art. When absent, use a solid-colour placeholder and initials. Do not invent product artwork or claim a product is available.

Library, discovery, account.

Library

Separate owned, downloadable, installed and unavailable states in text. Use Download or Open only when that action exists.

Discover

Use an editorial introduction and real product art. Distinguish owned, available and purchasable. Price and availability must reflect product data.

Account

Keep identity, recovery and device management calm. Explain consequences before removing access or signing out.

Host-owned experiences

On a developer’s own sign-in or product surface, the host identity still leads. Locker must not replace required Polaris Key attribution.

Make the next step obvious.

Empty library

“Your library starts here.” Follow with the actual available action; avoid implying a store exists before it ships.

Offline

“You’re offline. Try again when you’re connected.” Preserve any usable local state; do not promise offline downloads or sign-in.

Recovery

“We couldn’t start this download. Try again.” Add a specific recovery step when known.

Action language

Prefer Open, Download, View details and Manage devices. Describe the user-visible outcome, not the internal service or transaction.

Hold the star still.

Identity

Keep the star stationary. A one-time subtle reveal of the bookends can introduce the brand; avoid spinning, bouncing or perpetual logo animation.

Product

Use the parent motion system. Feedback follows the actual action and transfer state. Never imply measured download speed through staged progress.

Reduced motion

Remove spatial movement and decorative loops. Maintain focus and scroll position; communicate changes with text and state.

Interaction

Aim for 44px primary touch targets, visible keyboard focus and non-colour state cues. Check zoom, narrow screens and long translated strings.

Keep the relationship readable.

Available on

Polaris Locker

Open in

Polaris Locker

Locker badges

Available on / Open in Polaris Locker. Supplied canvas: 320 x 104. Keep all vertical padding; the prefix stays Rubik 400. Use only where the destination or availability is real.

Parent endorsement

Use the existing approved Powered by Polaris Key assets for infrastructure attribution. Locker badges do not replace them. Parent marks stay violet and retain their original geometry.

Protect the open silhouette.

Do not reshape

Never stretch, rotate, crop, mirror, close the gap, remove the star or make the bookends symmetrical.

Do not decorate

No bevel, texture, outline treatment, shadow or gradient on the mark. Do not add gold, a lock, keyhole or signing bit.

Do not recolour arbitrarily

Use supplied theme variants. Mono means one ink across all three shapes. Keep coral distinct from the parent’s service palette.

Do not overclaim

Artwork does not certify security, ownership, availability or performance. Product and trust states require their own labels and evidence.

Pick the file that fits.

logos / SVG, PNG, PDF

Transparent marks and three outlined lockups in dark, light, white, black and coral. SVG is preferred for interfaces; PDF for vector placement in print.

icons + web

Square icon canvases, ICO, ICNS, dedicated micro favicon, touch icon and a sample web manifest. The maskable export has extra safe area.

badges + social

Transparent, sticker and outline badges; square, landscape and portrait campaign canvases. Confirm destination and copy before publishing.

tokens + source

CSS and JSON colour roles; Rubik fonts and OFL notice; reproducible Python generator. Platform-specific submission requirements remain the responsibility of each release.

A reviewed identity, ready to adopt.

Source of truth

This pack is Locker v1, based on the user-selected A2 concept and the Polaris Key guide dated 8 October 2026. It does not claim to modify the platform repository.

Adoption

Add the reviewed master and scoped Locker tokens to packages/brand and docs/design/BRAND.md. Keep existing Key and Delivery identifiers and services unchanged.

Release checks

Inspect both themes and mono at 16, 24, 32, 48 and 96px. Verify labels, contrast, focus, actual assets and product states in the target renderer.

Versioning

Regenerate from source; record any geometry or token change as a new version. Keep the manifest and hashes with distributed exports.
