One public name.

Polaris Locker is the identity on every public-facing surface.

Compact Bookends / A2

Coral Bookends identifies Polaris Locker across marketing, product, developer and partner experiences. The underlying platform is Polaris Key.

Identity system / Edition 01.3

Start with the right reference.

03-05 / Identity

Positioning, architecture and the approved master.

06-10 / Foundations

Optical sizing, clear space, lockups, colour and typography.

11-15 / Expression

Composition, public surfaces, voice, motion and attribution.

16-20 / Delivery and alignment

Asset selection, governance, shared foundations and capability colours.

A home for your software.

One public identity for builders, customers and partners.

Purpose

Polaris Locker is the public name for the platform and its experiences, from developer tools and docs to discovery, library and account. Polaris Key supplies the underlying technical infrastructure.

Personality

Welcoming, capable and clear. Help people build, find, access and manage software with useful actions and honest product claims.

Language

Use Polaris Locker on first mention and Locker when context is established. Name the surface by its job: Docs, Console, Library, Discover or Account. Key may be named in technical explanations; it is not a second public brand.

Locker outside. Key underneath.

Public identity / Polaris Locker

Use coral Bookends and the Locker name on marketing, public docs, console, authentication, downloads, emails, SDK presentation and integration badges.

Underlying platform / Polaris Key

Key remains a distinct platform brand with its own guide, Pinned K, Star Cut, colours and service identities. Locker is the identity used on public-facing product surfaces. The guide preserves Key’s brand rather than reducing it to an implementation label.

Capabilities

License, Config, Release, Distribution, Update, Identity, Cloud Sync, Commerce and Content Packs appear as capabilities within Locker. Their service semantics do not change.

Customer products

Host product names and artwork still lead in host-owned experiences. Any Polaris attribution uses Polaris Locker. This rule does not rename customers’ products.

The star stays open.

The supplied vectors are the production interpretation of selected concept A2.

Three independent shapes

A tall left bookend, a shorter rising right bookend and one four-point star. Preserve the asymmetry, softened corners and clear gaps.

Always use the master

Use the supplied SVG, outlined lockup or exported PNG. Never trace the concept image, rebuild the star, or create a new shelf arrangement.

Small is a separate drawing.

Choose the cut by displayed size, not by export resolution or device pixel ratio.

16px 24px 32px 48px 96px

16-23px / Micro

Use the dedicated micro source for browser favicons and editor integrations. Simplified corners and a wider star preserve the three-part reading.

24px and above / Master

The master supports service-size, navigation and display use. All cuts are flat; Locker has no signing bit or gradient.

Give the mark room.

Minimum clearance

Reserve at least one quarter of the visible glyph height around standalone marks and lockups. Background containers can be closer only in the supplied app-icon and badge canvases.

Minimum use

Standalone mark: 24 CSS px square; micro exception: 16px. Horizontal lockup: 180px wide. Compact: 120px wide. Stacked: 160px wide. For crowded navigation, choose the mark with an accessible label.

One name. Flexible proportions.

Stacked

Coral identifies the public brand.

Use bright coral on dark; use the deeper companion on light for useful contrast.

Coral / dark	#FF7869	7.71:1
Deep coral / light	#C44438	4.68:1
White / deep coral	#FFFFFF	4.96:1
Dark / coral	#060912	7.71:1
Body / dark	#DBE4FF	15.68:1

Ratios are computed from the flat sRGB pairs shown. Bright coral is not the light-theme body-text colour. Gold remains a signature-status indicator; coral is never a success, warning or payment state by itself.

Friendly, with a clear hierarchy.

Your library

Find something worth opening.

Rubik / 400, 500, 600

400 body and badge prefixes; 500 controls and wordmarks; 600 headings. Avoid universal boldness.

Product rhythm

Body 16-18px, labels 14-16px, section titles 24-32px. Let long names wrap. Use 1.6-1.75 line height for reading copy, as in Key.

Technical details

Use the parent system’s JetBrains Mono for diagnostic details only. The pack includes Rubik and its OFL notice; outlined logos need no installed font.

Let the products lead.

Page structure

Use shared grounds and neutrals. Coral identifies the Locker shell. Capability panels retain the Key service accents; use one accent per story.

Collection cards

Prioritize real product artwork and title, then access and a useful action. Device capacity and license detail support the decision.

Layout

Use a 4px spacing base and 24px section gutters for Locker product layouts. Match Key’s generous vertical rhythm. Keep 44px primary targets and visible focus.

Imagery

Use authentic product art. When absent, use a solid-colour placeholder and initials. Do not invent product artwork or claim a product is available.

Every public surface uses Locker.

Marketing and developer surfaces

Website, pricing, campaigns, docs, developer console, SDK landing pages and repository presentation use Locker names and artwork. Preserve executable identifiers in code examples.

Product and account

Library, Discover, downloads, sign-in, consent, device authorization, recovery and account use Locker. Retain truthful owned, available and purchasable states.

Communications and integrations

Support, notifications, email sender display names, social profiles and public badges use Locker. Show Powered by Polaris Locker for attribution.

Host-owned experiences

Keep the host product and identity provider recognizable. Apply Locker to the Polaris-provided identity or attribution, not to the customer’s own product brand.

Make the next step obvious.

Empty library

“Your library starts here.” Follow with the actual available action; avoid implying a store exists before it ships.

Offline

“You’re offline. Try again when you’re connected.” Preserve any usable local state; do not promise offline downloads or sign-in.

Recovery

“We couldn’t start this download. Try again.” Add a specific recovery step when known.

Action language

Prefer Open, Download, View details and Manage devices. Describe the user-visible outcome, not the internal service or transaction.

Hold the star still.

Identity

Keep the star stationary. A one-time subtle reveal of the bookends can introduce the brand; avoid spinning, bouncing or perpetual logo animation.

Product

Inherit Key’s motion system: about 80ms press feedback, 200-260ms navigation and 320-480ms entrance. Runtime tokens govern timing. Progress reflects actual state.

Reduced motion

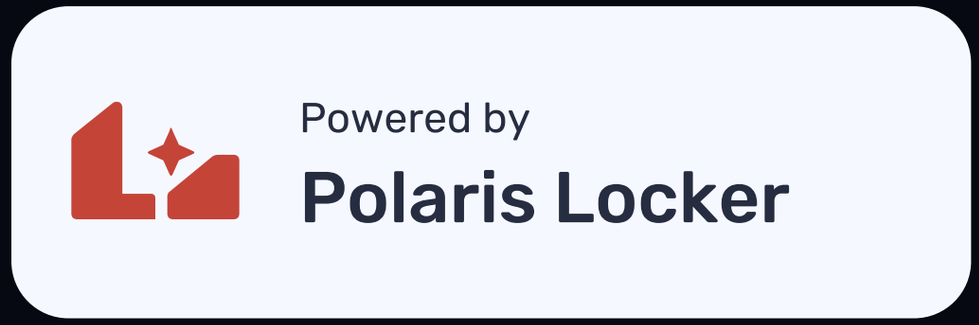

Remove spatial movement and decorative loops. Maintain focus and scroll position; communicate changes with text and state.

Interaction

Aim for 44px primary touch targets, visible keyboard focus and non-colour state cues. Check zoom, narrow screens and long translated strings.

A badge for the action.

Public attribution

The library includes 16 labels: availability, play, purchase, login, downloads, installation, account, sync, updates and attribution. Canvas and minimum display: 320 x 104. Keep the vertical padding and Rubik 400 prefixes. See the badge catalogue for every option.

Technical explanation

Match the label to the real action. Play on needs a playable destination; Purchase with needs a purchase flow; Login with needs an authentication flow. Key retains its platform-brand assets and guide. Public-facing Polaris attribution uses Locker.

Protect the open silhouette.

Do not reshape

Never stretch, rotate, crop, mirror, close the gap, remove the star or make the bookends symmetrical.

Do not decorate

No bevel, texture, outline treatment, shadow or gradient on the mark. Do not add gold, a lock, keyhole or signing bit.

Do not recolour arbitrarily

Use supplied theme variants. Mono means one ink across all three shapes. Keep coral distinct from the parent’s service palette.

Do not overclaim

Artwork does not certify security, ownership, availability or performance. Product and trust states require their own labels and evidence.

Pick the file that fits.

logos / SVG, PNG, PDF

Transparent marks and three outlined lockups in dark, light, white, black and coral. SVG is preferred for interfaces; PDF for vector placement in print.

icons + web

Square icon canvases, ICO, ICNS, dedicated micro favicon, touch icon and a sample web manifest. The maskable export has extra safe area.

badges + social

Transparent, sticker and outline badges; square, landscape and portrait campaign canvases. Confirm destination and copy before publishing.

tokens + source

Shared family and Locker CSS / JSON roles; Rubik fonts and OFL notice; reproducible Python generator. Platform-specific submission requirements remain the responsibility of each release.

One rule across every channel.

Authority

The 19 October 2026 public-brand update supersedes the earlier consumer-only scope. A2 geometry and coral remain approved. Locker covers all public surfaces; Key is the underlying platform.

Adoption

Integrate public Locker artwork and labels into packages/brand and docs/design/BRAND.md. Review web, console, docs, authentication, emails, downloads, SDKs and partner attribution.

Technical stability

This naming decision does not rename API fields, service slugs, packages, commands, repositories, domains or legal entities. Any such migration requires its own compatibility work.

Release checks

Inspect both themes and mono at 16, 24, 32, 48 and 96px. Verify correct public naming, labels, contrast, focus and product states. These guides do not claim deployment to live surfaces.

Two identities. One design language.

Locker carries the public experience. Key retains the platform brand and its full identity guide.

Polaris Key

Underlying platform

Pinned K; Star Cut for Delivery

Polaris Locker

All public-facing Polaris surfaces

A2 Compact Bookends

Type	Rubik 400 body / 500 controls / 600 headings; regular badge prefixes.
Grounds	Page #060912 / #F6F8FF; raised #0D111B / #FFFFFF.
Text	Body #DBE4FF / #262D40; muted #B5BED3 / #48536B.
Controls	Boundary #61697B / #7E8699; 44px primary targets and visible focus.
Mark language	Stationary four-point star; flat colour; open gaps; approved paths.
Spacing	One-quarter glyph-height clearance; preserve complete badge canvases.
Voice and motion	Clear actions and recovery; stable star; honest progress; reduced motion.

Keep each approved silhouette and optical cut. This is a shared visual language, not one interchangeable logo. Both guides and token exports use source/family_system.py.

The same service means the same colour.

A coral Locker shell can carry a service accent. Preserve the capability system documented by Key.

CAPABILITY	DISPLAY ACCENT	KEY IDENTITY FAMILY
License	#C6E940	Pinned K
Config	#FAC700	Pinned K
Release	#00DBFD	Pinned K
Distribution	#39D075	Star Cut
Update	#FE8001	Star Cut
Identity	#D77DF2	Pinned K
Cloud Sync	#14F8E1	Pinned K
Commerce	#39D075	Star Cut
Content Packs	#FE8001	Star Cut

Use one capability accent per story. These bright swatches are display references; inherit upstream fg / solid / on / subtle roles for actual UI. Coral names Locker, violet names Key, and gold retains signature meaning.

Public names and attribution remain Polaris Locker. Technical identifiers and host-owned brands remain accurate.
